Date _____

What do you know about dinosaurs?

Dinosaurs are animals that lived on Earth long ago. There were no people on Earth when dinosaurs walked here. We know about these animals because we have the remains of some of their bones. We have learned many things about these animals from those remains. For instance, there were big, medium-sized, and small dinosaurs. Some ate plants and others ate meat. Some dinosaurs ate both meat and plants. Meat-eating dinosaurs had sharp teeth to tear their food. Plant-eaters had teeth that could grind tough plants. We also know that dinosaur babies hatched from eggs because we have found remains of the eggs. What we do not know about dinosaurs is what colour they were or why they all died. There is still much to learn about dinosaurs.

Answer the following questions:

1. Use one word to tell what this story is all about.

2. How do we know there were dinosaurs?

3. How were the meat eating dinosaurs able to eat ?

4. What sort of teeth did plant-eaters have?

5. What size were the dinosaurs?

6. What don't we know about dinosaurs?

What colour do you think dinosaurs were? Colour the dinosaurs on the sheet and explain below why you chose the colour(s) you did.
