

P5 linked their paralympic topic to their art work, taking inspiration from the host city Japan.

We participated in a total of four STEM workshops including 'language evolves' where we learned about the way language has developed over time.

We have enjoyed collaborating with each other this term and created a French calendar so we can demonstrate our knowledge of days, months and the weather.

During Math Week we took part in an outdoor trail. We explored shape, pattern, symmetry, position and direction and coordinates.

We had a great time!

We enjoyed discussing, designing and building our sustainable habitats as well as participating in a climate workshop where we were able to see the effect of weather on clay models. Our models will become part of a art exhibit at the Mining Museum.
